

RV Residential Flush™

BLACK TANK BYPASS VALVE KIT

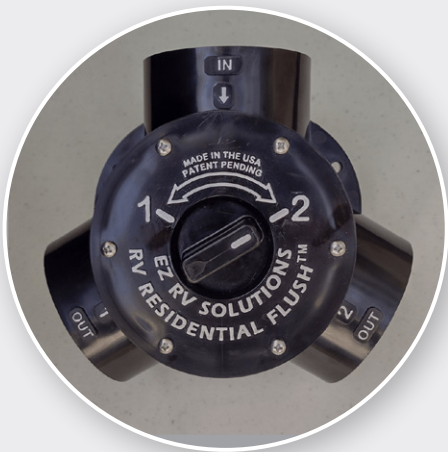

— Remote Actuation Drive Kits Sold Separately —

The Industry's First and Only RV Black Tank Bypass Solution

- **Enhanced Comfort and Convenience:** Experience residential-style toilet functionality in your RV.
- **Versatile Compatibility:** Use either RV or residential-style toilets with ease.
- **Toilet Paper Freedom:** Choose your preferred toilet paper when using the RV Residential Flush mode.
- **Efficient Black Tank Usage:** Only rely on your RV's black tank when necessary.
- **Simplified Maintenance:**
 - Reduces or eliminates the need for routine black tank tasks, such as draining, filling, flushing, and cleansing.
 - Saves water—avoiding repetitive black tank maintenance can conserve 30–100 gallons of water per session (when a sewer connection is available).
- **Odor and Pest Control:** Pair with the RV Snap Trap to prevent sewer gas and sewer fly infiltration when a sewer connection is present.
- **Extended System Longevity:** Improves the lifespan and performance of your RV's black tank system and mechanical components.
- **Eco-Friendly Solution:** Reduces or eliminates the need for chemical black tank treatments.
- **Proven Reliability:** Over two years of in-field testing with multiple full-time RV families using both RV and residential-style toilets.

BLACK TANK BYPASS VALVE KIT — QUALIFIER

- **Professional Assistance:** It is recommended to have a certified RV technician or licensed plumber handle the installation.
- **Application Limitations:**
 - Designed specifically for Fifth Wheel trailers.
 - Applicable for upper-level or upper-deck bathrooms only.
- **Space Requirements:**
 - Requires at least 24 inches of clearance beneath the floor where the toilet is mounted for the Bypass Valve and associated plumbing.
 - The Bypass Valve must be installed directly under the toilet.

- **Plumbing Pathway Verification:**
 - Ensure a clear pathway exists for black tank plumbing to run from the Bypass Valve to the black tank inlet pipe.
 - Confirm a clear pathway for bypass plumbing to connect from the Bypass Valve to the primary discharge pipe.
